Professional Summary

AI Engineer and Full-Stack Software Engineer with 6+ years of software and digital engineering experience, specialising in agentic AI, intelligent automation and API-integrated business applications. Build Python and TypeScript systems using LLMs, tool calling, retrieval-augmented generation (RAG), embeddings, structured outputs, workflow orchestration and human-in-the-loop decision support.

Experience spans AI application engineering, business process assessment, model training and evaluation, and production-oriented software delivery. Engineer the services around AI - FastAPI/REST services, secure integrations, persistent state, asynchronous jobs, prompt evaluation, auditability and observability - with emphasis on reliability, grounded responses and controlled execution.

Technical Skills

AI engineering: AI agents, LangGraph, multi-agent orchestration, LLM integration, function/tool calling, RAG, embeddings, vector search, prompt/context engineering, structured outputs, model and prompt evaluation

Languages and services: Python (3+ years), JavaScript, TypeScript, SQL, FastAPI, Node.js, Express, REST APIs, OpenAPI, React, ASP.NET Core

Automation and architecture: n8n, workflow orchestration, webhooks, APIs, RabbitMQ, Azure Service Bus, asynchronous workers, event-driven systems, idempotency, retries, human approval

AI platforms and tooling: Microsoft Foundry, Azure OpenAI, Gemini, Ollama, Hugging Face Transformers, Claude, DeepSeek, Amazon Bedrock, Vertex AI, PyTorch

Data and security: PostgreSQL/pgvector, MongoDB, Redis, Prisma, embeddings, SQL analytics, authentication, RBAC, IAM, least privilege, audit trails

DevOps and reliability: Docker, Git, GitHub Actions, CI/CD, OpenTelemetry, Prometheus, Grafana, logging, integration tests, fault handling, Azure, AWS, Google Cloud

Experience

Python and Full-Stack Engineer in AI Training and Evaluation

Turing / OpenTrain AI | February 2026 – Present

Contribute Python and JavaScript/TypeScript engineering to AI training and evaluation focused on coding quality, reasoning accuracy, technical correctness and reliable model responses.

- Develop and review programming solutions; verify correctness, test coverage, edge cases, readability and maintainability across Python and TypeScript.
- Evaluate and rank model responses against defined criteria, documenting reasoning gaps, implementation defects, security concerns and reproducibility.
- Prepare task-specific examples and structured human feedback for supervised fine-tuning (SFT) and reinforcement learning from human feedback (RLHF).

Experience Continued

AI Engineer

kailor | February 2025 – Present

Design and deliver AI-assisted applications, agent workflows and automation solutions that integrate language models with business systems, from process assessment to controlled implementation.

- Design AI agents and tool-using workflows with Python, TypeScript, retrieval, REST APIs and structured LLM outputs.
- Build AI-assisted enquiry, administration and follow-up applications using persistent state, business rules and API integrations.
- Assess manual processes and integration gaps; scope AI, conventional software or third-party automation to fit business needs.
- Implement authentication, permissions, retries, exception handling, audit trails and human approval for sensitive actions.
- Test model outputs and workflow reliability; document limitations and implementation trade-offs.

Full-Stack Software Engineer & AI Publisher

kailor | June 2022 – January 2025

Engineered full-stack web applications and digital publishing workflows, including interfaces, backend services, data handling, content operations and integrated business tools.

- Developed React/JavaScript and Node.js features, REST APIs, authentication, persistent data models and end-to-end application state.
- Built and maintained digital publishing and content workflows, integrating external services and automating repetitive operational tasks.
- Improved reliability through integration testing, defect resolution, workflow refinements and stakeholder-led iteration.

Technical and Digital Operations Lead and Co-Founder

Firstdaes Entertainment | January 2020 – June 2022

Co-founded an entertainment business and led its digital systems, workflow design and technology-enabled operations.

- Translated operational needs into technical requirements; managed implementation, testing and troubleshooting of digital services.
- Integrated communications, marketing and analytics tooling; used performance data and operational feedback to refine processes.

Contract Specialist in Technical Content and Documentation

3Play Media | February 2016 – January 2020

- Reviewed, transcribed and edited specialist material covering software, cloud, networking and cybersecurity, preserving technical terminology and accuracy.
- Resolved ambiguous content and maintained quality and delivery standards across assignments for enterprise technology subject matter.

Education

Stellenbosch University: Generative AI Mini Bootcamp | June – September 2026

HyperionDev: Full-Stack Software Engineering and Web Development | January – June 2026

University of South Africa: BSc Computer Science | 2017 – 2022

Selected Projects

Independent engineering projects demonstrating agentic AI, LLMOps, retrieval systems and reliable automation.

Microsoft AI-Powered Software Engineering & DevOps Platform

Microsoft Foundry · Python/FastAPI · TypeScript/Express · Azure · GitHub APIs · MongoDB · AI agents

Built a three-agent engineering operations workflow for incident investigation, evidence review and remediation planning. Integrates GitHub and scoped Azure telemetry, persists investigation runs and cited evidence, and separates AI recommendations from human-approved changes. Includes signed webhook intake, audit history and recovery verification.

Repository: https://github.com/keenosmith-del/microsoft-ai-powered-software-engineering-devops

EventOps Intelligence — Agentic AI and RAG Workspace

Python · FastAPI · LangGraph · Gemini · RAG · PostgreSQL · n8n · React/TypeScript

Engineered an event-operations application combining knowledge ingestion, evidence-grounded retrieval and an attendee-verification agent. Implemented graph checkpoints, tool boundaries, structured extraction, persisted runs, discrepancy review and verified-only export. Local fixture-mode workflows and tests are validated; live external-provider integrations remain configuration-dependent.

Repository: https://github.com/keenosmith-del/eventops-intelligence-v.02

Enterprise AI Customer Operations — LLMOps Platform

TypeScript · Node.js/Express · PostgreSQL · Prisma · RabbitMQ · Prompt evaluation · Docker

Developed an event-driven customer-case triage platform with asynchronous AI classification, response recommendations and operator approvals. Added versioned prompts, labelled evaluation cases and accuracy, macro-F1 and latency reporting. Uses a transactional outbox, durable worker, idempotency, retries and dead-letter handling; model outputs remain reviewable drafts.

Repository: https://github.com/keenosmith-del/enterprise-ai-customer-operations

Ollama Private Business Intelligence and RAG Platform

Ollama · Python/FastAPI · Node.js · PostgreSQL/pgvector · Embeddings · React · Docker

Built a private business analysis platform with local LLM inference, document ingestion, semantic retrieval and evidence-grounded responses. Combines pgvector RAG with deterministic SQL-based financial analysis, user/role permissions, source-level access control and saved analysis history. Verified local workflows using real Ollama models and integration tests.

Selected Credentials and Professional Development

Microsoft AI: AI-103 — Azure AI Apps and Agents Developer Associate | Completed October 2026; AI-500 | In progress; Microsoft Applied Skills — Defender XDR

Generative AI and engineering: WeThinkCode_ Generative AI for Professionals | October 2026; Generative AI for Software Engineers; AI Course for Developers; AWS AI/ML Scholars AI Practitioner and AI Programmer Nanodegree

Automation and related training: n8n Workflow Automation and AI; Microsoft × Founderz Cyber Genius; Founderz Agent Architect (enrolled); IBM Enterprise Design Thinking Practitioner; Make Agentic AI Work for You; Google Cloud Kubernetes
