Professional Summary

Full-Stack Software Engineer developing business applications across frontend interfaces, backend services and data layers. Combine JavaScript/TypeScript and Python with React, Node.js, Express, FastAPI, REST APIs and SQL/NoSQL databases to turn functional requirements into maintainable, integrated software. Work across authentication, application state, data modelling, third-party APIs and responsive user experiences.

Experience includes independent end-to-end software delivery, AI training and evaluation, and business technology consulting. Build application workflows with testing, validation, permissions, asynchronous jobs, integration boundaries and operational visibility. Focus on readable code, practical user journeys and reliable behaviour from browser to database, while communicating technical choices and limitations clearly.

Technical Skills

AI engineering: AI agents, multi-agent orchestration, tool calling, RAG, embeddings, vector search, prompt and context engineering, structured outputs, LLM integration, evaluation, human review

Programming and services: Python, JavaScript, TypeScript, SQL, FastAPI, Node.js, Express, REST APIs, OpenAPI, React

Automation and integration: n8n, webhooks, API integration, workflow orchestration, asynchronous processing, event-driven architecture, MCP

AI platforms: Microsoft Foundry, Azure OpenAI, Anthropic Claude, Amazon Bedrock, Gemini, Vertex AI, Ollama, Hugging Face

Reliability and delivery: Exception handling, retries and backoff, logging, monitoring, OpenTelemetry, Prometheus, Grafana, Docker, Git, GitHub Actions, CI/CD

Data and security: PostgreSQL, MongoDB, Prisma, Mongoose, Redis, IAM, RBAC, least privilege, authentication and authorisation, Azure, AWS, Google Cloud

Experience

Python and Full Stack Engineer in AI Training and Evaluation

Turing / OpenTrain AI | February 2026 – Present

Contribute Python and JavaScript/TypeScript engineering to AI training and evaluation workflows focused on coding ability, reasoning, technical accuracy and response quality.

- Develop, review and evaluate programming solutions for benchmarking and model improvement; assess correctness, maintainability, edge cases and reproducibility.
- Conduct model evaluations and rank responses against defined criteria, documenting technical rationales, reasoning gaps and implementation defects.
- Create and refine task-specific examples for Supervised Fine-Tuning (SFT); provide structured feedback for Reinforcement Learning with Human Feedback (RLHF) workflows.
- Review code and documentation for readability, modularity, testing, security and stability across Python, JavaScript/TypeScript and Docker environments.

Experience Continued

Founder | AI Solutions Engineer and Technology Consultant

KAILOR | June 2026 – Present

Developed an AI-enabled technology consultancy using AI-assisted assessment to identify business needs and scope software, automation and integration solutions. Combine hands-on engineering, specialist partners and third-party platforms according to client requirements.

- Map business processes, manual tasks and integration gaps; translate findings into technical recommendations, solution architectures and implementation scopes.
- Design discovery and assessment workflows that distinguish opportunities for AI from needs better addressed through conventional software or workflow automation.
- Define application and integration approaches using LLMs, APIs, webhooks, structured business rules, workflow orchestration and human review.
- Plan permissions, exception handling, reliability controls and operational safeguards; explain technical limitations and delivery priorities in business terms.

Selected Confidential Client Work

AI and automation engagement: Designed an AI-assisted approach to repetitive administration, customer enquiries and follow-up activities. Mapped the workflow and combined LLM processing, business rules, APIs and orchestration, retaining review for exceptions and higher-risk actions. Client details withheld.

AI application engineering engagement: Designed and developed an AI-enabled application for business information and recurring operational tasks. Engineered structured model interactions, APIs, data processing, application state and controlled outputs within an end-to-end workflow. Client details withheld.

Business process and AI assessment: Assessed manual activities, digital tools and integration gaps. Produced implementation recommendations covering AI, conventional software and third-party automation, with priorities for architecture, human oversight and operational risk. Client details withheld.

Technical and Digital Operations Lead and Co Founder

Firstdaes Entertainment | January 2020 – June 2026

Co-founded an events and entertainment business, owning digital platforms, business systems, workflow design and technology-enabled operational improvements.

- Translated business objectives into requirements, digital solutions and practical process improvements; managed implementation, testing and troubleshooting.
- Evaluated and integrated services for communications, marketing and analytics; coordinated external providers, resources and delivery dependencies.
- Used operational feedback and performance data to improve digital initiatives and maintain the company's technical environment.

Contract Specialist in Technical Content and Documentation

3Play Media | February 2021 – September 2025

- Reviewed, transcribed and edited complex technical material covering software, cloud infrastructure, networking and cybersecurity, preserving terminology and contextual accuracy.
- Resolved ambiguity and inconsistencies; independently managed quality and deadlines across specialist assignments.
- Worked with material associated with enterprise technology organisations including Cisco, Oracle, Palo Alto Networks, Salesforce, NVIDIA and Apple.

Education

Stellenbosch University: Generative AI Mini Bootcamp | June - September 2026

HyperionDev: Full-Stack Software Engineering and Web Development | January - June 2026

University of South Africa: BSc Computer Science studies | 2017 – 2022 GPA 3.75

Selected Projects

Independent portfolio projects demonstrating frontend, backend, API integration and maintainable business applications.

Enterprise AI Customer Operations Platform

React / TypeScript · Express · PostgreSQL · Prisma · RabbitMQ · Docker · Vitest

Built a complete case-management workspace with filtering, review queues, saved operator decisions and audit trails. Developed REST APIs, relational data models and a separate worker for asynchronous recommendations and evaluations. Includes end-to-end case state transitions, retry controls, test coverage and responsive frontend views; AI output remains subject to human approval.

Repository: https://github.com/keenosmith-del/enterprise-ai-customer-operations

kailor Business Discovery and Technology Consultancy Platform

React · Node.js / TypeScript · PostgreSQL · Prisma · REST APIs · Docker

Developed a full-stack consultancy application for guided business discovery, conversation and structured technical assessments. Supports account and guest journeys, independent projects, persistent conversations, versioned context and report generation. Integrates application state, authentication and workflow orchestration into an end-to-end user experience.

Repository: https://github.com/keenosmith-del/kailor

n8n Enterprise Workflow and Integration OpsFlow Platform

React / TypeScript · NestJS · PostgreSQL · n8n · REST APIs · RabbitMQ · Docker

Designed a procurement application spanning request submission, budget validation, supplier quotations, approvals and purchase-order creation. The frontend and backend own user workflows, business state, permissions and audit history; n8n handles integration orchestration. Demonstrates service boundaries, API contracts, asynchronous messaging, retries and operational visibility.

Repository: https://github.com/keenosmith-del/n8n-workflow-integration-opsflow

MERN Productivity Management Platform

MongoDB · Express · React · Node.js · JWT · REST APIs · Mongoose

Built a full-stack productivity application bringing together tasks, projects, goals, reminders, notes, folders and calendar functions. Implemented user accounts, protected routes, JWT authentication, CRUD workflows, MongoDB persistence, search and filtering. Demonstrates component-driven frontend design and modular API and data-layer engineering.

Repository: https://github.com/keenosmith-del/personal-productivity-desktop

Music Streaming and API Platform

React · JavaScript · REST APIs · External API Integration · State Management

Developed a music discovery and playback experience integrating external artist, album and track data. Includes search, artist and album navigation, shared playback state, dynamic queue handling and autoplay behaviour. Emphasises asynchronous API integration, reusable UI components and coordinated frontend and backend application state.

Repository: https://github.com/keenosmith-del/music-api

Selected Credentials and Professional Development

Microsoft AI-103: Azure AI Apps and Agents Developer Associate certification preparation - In progress

Automation and cloud: n8n Workflow Automation and AI; Google Cloud Manage Kubernetes in Google Cloud; Microsoft Applied Skills in Defender XDR

AI development: Microsoft × Founderz Agent Architect and Cybersecurity training; AWS × Udacity AI/ML Scholars AI Practitioner; AI Programmer Nanodegree; WeThinkCode_ Generative AI for Software Engineers and AI Course for Developers
